- Calibration Time Required: 5 to 7 working days unless otherwise specified.
- Turn-around time is assessed and based on the availability of standards and personnel to perform the calibration service.

Method Used:

- If no other calibration method is specified by the customer, MP will use manufacturer, military, internationally recognized industry standard (ASTM, NIST, OML, etc.), or MP locally developed calibration procedure will be utilized based on availability.

Statements of Pass or Fail Conformance:

The uncertainty of measurement will be taken into account when determining compliance with specification, as per ILAC-G8:03/2009. All measurements and test results guard banded to ensure the probability of false-accept does not exceed 2% in compliance with ANSI/NCSL Z540.3-2006.

The status of compliance with the acceptance criteria will be reported as:

PASS - Compliant with specification;

FAIL - Not compliant with specification.

FAIL² - The measured value is not within the acceptance limits. However, a portion of the expanded uncertainty of measurement at 95% is within the specified tolerance.

PASS² - The measured value is within acceptance limits. However, a portion of the expanded uncertainty of measurement at 95% exceeds the specified tolerance.

The expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%, unless otherwise stated. The calibration report to be issued is compliance with ISO/IEC 17025:2017 and ANSI/NCSL Z540.3-2006 Method 6-Guard Bands based on Test Uncertainty Ratio.
