I/c No : 911129-02-6121

Dear doctor,

Thank you for seeing this patient diagnosed with RVD currently on HAART at Hosp Majlis.

It was noted to have right orbital apex syndrome & right retrobulbar intracanal mass. Biopsy done at Hosp Pantai revealed EBV-associated smooth muscle tumour.

Currently noted progressively increasing (R) vision (1/60 to HM), MRI repeated, noted lesion is increasing in size with optic nerve compression. As the oncologist (Dr. Muthu) is keen for repeat biopsy, kindly see the patient and offer your expert opinion.

Thank you.

Best Regards,

DR. S. KALA
