TEST	RESULT	FLAG	UNIT	REFERENCE RANGE
------	--------	------	------	-----------------

MOLECULAR

CORONAVIRUS DISEASE 2019 RNA PCR

Nature of Specimen	Nasopharyngeal and Oropharyngeal Swab
SARS-CoV-2 RNA	Not Detected

Interpretation:

Negative for Coronavirus disease 2019 (COVID-19). A single negative result, particularly if the samples were collected from an upper respiratory tract does not exclude the infection. Repeat sampling and testing. Lower respiratory tract specimen is strongly recommended in severe or progressive disease (1).

This assay is in vitro diagnostic medical device designed for qualitative detection of Coronavirus Disease 2019 (COVID-19) or previously known as Novel Coronavirus 2019 by using real-time reverse transcription PCR. This PCR assay is able to detect E gene, RdRP gene, N gene, S gene and ORFlab gene. The detection limit of this assay is 100 RNA copies/reaction and it is CE-IVD certified.

Suggestion

Sample with negative for COVID-19 is recommended to further test using our Respiratory Pathogen Panel (RPP) to rule out other respiratory pathogen infection.
