

A Textron Company

## **INFORMATION LETTER**

**429-21-13**  
1 February 2021

**TO: All owners and operators of Model 429 helicopters**

**SUBJECT: INSTALLATION OF ALPINE AEROTECH LP (AAL) CREW BARRIER KIT**

Due to the COVID-19 pandemic crisis, several operators have requested support from Bell for an acceptable solution to isolate the cockpit and the passenger's cabin. In order to help our customers with the new barrier system installation requirement, Bell has reviewed the AAL documentation. Bell does not consider this kit to be a major modification and finds it to be an acceptable solution to isolate the cockpit from the main cabin.

If approval from the local airworthiness authority is required to install the AAL kit, operators are invited to use this Information Letter as reference material when requesting approval. The Bell accepted AAL crew barrier kits can be procured through Aeronautical Accessories by contacting the sales department at: [sales@aero-access.com](mailto:sales@aero-access.com)

For recommendations on cleaning and disinfecting Bell aircraft as a result of the coronavirus (Covid-19), refer to the previously published general information letter GEN-20-146.
